CS472: Intro to Web Development

University of Wisconsin-Madison

HTML/CSS/JS Project Proposal

Please decide on a group name and list your group members (as their name appears on Canvas) below.

Additionally, be sure to join a group within Canvas > People > HTML/CSS/JS Project Groups.

Then, decide on a project, give it a meaningful title (e.g. Library System) and a brief project description (max of 300 words). See Canvas for examples of project ideas. When you are finished, save this document as a PDF and upload it to Canvas!

Project Title	Lifestyle Improvement Website
Project Description	The website aims to improve customers' life well-being. It integrates multiple ingredients such as fitness tracking, appearance checking, and diet management. Users can explore personalized workout routines, set and adjust calorie-burning goals, and monitor their progress through an interactive fitness planner. At the same time, they can browse and shop for activewear that suits their fitness style and body goals, blending functionality with fashion. The platform also includes features like a BMI calculator, daily nutrition tips, and a customizable meal plan to help users manage their diets more effectively. We want to focus on user interaction in our website and not just presenting information. We want people to have fun with what they're interacting with while learning about better ways to improve their lifestyles. So we also want to focus on website functionalities and incorporate them into communicating goals.
